Appl. No. 10/613,371 Amdt. Dated March 19, 2006 Reply to Office Action of September 20, 2005

## AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

 (Previously Presented) A magnetic recording medium having a magnetic layer with a thickness 50 nm or less formed over a surface of an elongated nonmagnetic support by a vacuum thin film forming technique,

wherein an angle  $\theta$  which is a growth direction of magnetic particles in a longitudinal cross-section of said magnetic layer with respect to a line normal to said nonmagnetic support, satisfies the following relation:

$$\theta i - \theta f \le 25^{\circ}$$

where  $\theta$ i is an angle of initial growth for said magnetic layer, and  $\theta$ f is an angle of final growth for said magnetic layer, and

and further wherein a deposition range is restricted such that a maximum incidence angle  $\alpha i$  and minimum incidence angle  $\alpha f$  satisfies the relationship:

$$\alpha i - \alpha f \le 25^{\circ}$$
.

- 2. (New) The magnetic recording medium according to claim 1, further including an underlying layer comprised of binder residents and having an average particle diameter of 5 to 30 nm and wherein he density of surface projections is in a range of from  $50 \times 10^4$  per millimeter squared to  $3000 \times 10^4$  per millimeter squared.
- 3. (New) The magnetic recording medium according to claim 1, further wherein the magnetic layer is less than the 50 nm in thickness.
